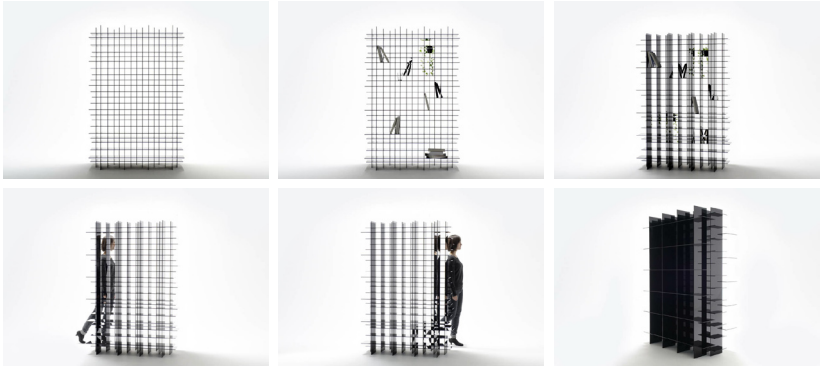
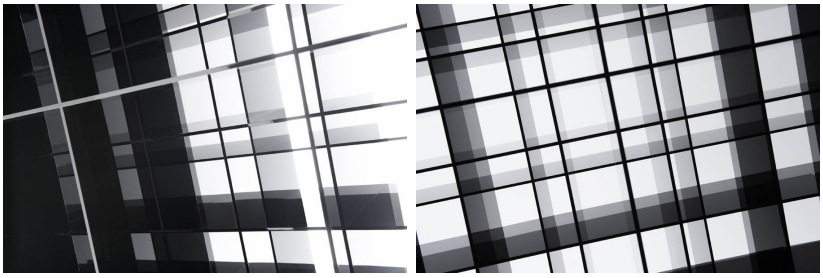
**Scatter Shelf by nendo**

*nendo has created a fascinating reflection game by deconstructing and mirroring images through slightly displacing acrylic sheets.*





Scatter Shelf by nendo. Photography and video by Masayuki Hayashi.

CLICK IMAGES TO ENLARGE

The scatter shelf is composed of 5mm black acrylic shelves in a grid form, stacked in three layers and slightly displaced. The resulting shelving unit is not only structurally strong but creates a visual effect in which objects placed on the shelves appear as though caught in a spider's web when viewed from the front.
When viewed on an angle, the glossy acrylic face creates a series of reflections within the shelves, making the'opaque' acrylic appear to be transparent.
The diffused reflections caused by the 'surfaces' shine and form also separates and scatters the view behind the shelving unit, creating a completely kaleidoscopic effect.
