DRIFT

DRIFT

BIOGRAPHY

DRIFT reconnects humanity with nature through technology. DRIFT manifests the phenomena and hidden properties of nature with the use of technology in order to learn from the Earth's underlying mechanisms and to re-establish our connection to it.

Dutch artists Lonneke Gordijn and Ralph Nauta founded DRIFT in 2007 after graduating from the Design Academy in Eindhoven. With a multi-disciplinary team of 64, they work on experiential sculptures, installations and performances. They first collaborated on Gordijn's graduation project, *Fragile Future*, which saw a number of ball-shaped LED lamps with real dandelion seeds glued onto them, giving the bulbs a flower-like appearance. With both depth and simplicity, DRIFT's work illuminates the parallels between man-made and natural structures through deconstructive, interactive and innovative processes. The artists raise fundamental questions about what life is, and explore a positive scenario for the future. *Fragile Future* turned out to be the most successful project of DRIFT so far.

All individual artworks have the ability to transform spaces. However, the confined parameters of a museum or a gallery does not always do justice to a body of work. Rather, architecture or the public sphere can often help it to reach its potential. DRIFT brings people, space and nature on to the same frequency, inspiring audiences to reconnect to our planet.

AWARDS
